EDUCATION

University of Pittsburgh, B.S. in Computer Science, **Minor in Business** *Expected Graduation: May 2028*
GPA: 3.31 / 4.0 *Pittsburgh, PA*
Relevant Coursework: Data Structures & Algorithms, Software Engineering, Systems Software, Web Applications
Member: Computer Science Club, AWS Cloud Club, Taekwondo Club

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, C, HTML, CSS, C++
Frameworks & Tools: Pandas, React.js, Vite.js, Node.js, Git, GitHub, Jupyter, AWS, Pandas, Anaconda, HuggingFace, OpenRouter, REST APIs

WORK EXPERIENCES

JFCS Squirrel Hill Food Pantry Sept 2026 - Present
Data Analyst Intern *Pittsburgh, PA*
- Analyze inventory and pricing data for a food pantry serving many families per week.
- Lead a price-benchmarking project comparing pantry item values to local supermarket prices to keep the database accurate.
- Present findings and recommended updates to pantry staff in an excel sheet with weekly reports on progress.

University of Pittsburgh July 2026 - Present
Undergraduate Teaching Assistant *Pittsburgh, PA*
- Host two open class labs for students to learn difficult topics about **Python** programming, topics, and ideas
- Hold **6** hours of weekly office hours, mentoring students in Python to boost lab completion rates by **30%**
- Demonstrate leadership by teaching **40+** students about various topics in programming, data structures, and algorithms.

University of Pittsburgh March 2025 - July 2025
Undergraduate Student Researcher *Pittsburgh, PA*
- Collaborated with a PhD student and another student in the medical field regarding Large Language Models on datasets.
- Evaluated LLMs for clinical NLP tasks, optimizing medical triaging accuracy across Asian languages.
- Benchmarked model performance using metrics (ROUGE, 2S) to ensure safe, contextualized reasoning in emergency situations.

PROJECTS

Pantry Price Benchmarking Tool - JFCS Squirrel Hill Food Pantry | Excel, Python *Sept 2026 - Present*
- Building a Python pipeline that collects grocery prices from 5 Pittsburgh-area supermarkets and matching them against 24 items in the pantry's inventory database.
- Normalizing prices to unit cost by oz, lbs, and count so items can be compared across different package sizes and brands.
- Designing a rule-based update policy that flags pantry item values differing from the local market price by more than 15%, so each recommended database change has a clear reason.

"@me", Personal Study Planner - HackRU '26 | JavaScript, CSS, HTML, Gemini *October 2026*
- A chrome extension that reads a course syllabus or is connected through the user's Canvas (via CanvasLMS) and creates a schedule that is built around each course in their designated term.
- It asks users for personal data, such as study times, session length, etc, and records it in their local chrome storage for the Gemini model to record and reference.
- Creates review quizzes, problems, and small exams and records user proficiency in topics..
- Flexible scheduling, pushes back/forward study sessions if the user has another event planned on top of a current session.

Multi-Lingual LLM Medical Research | Python, Qwen3-8B, Hugging Face, Jupyter Notebook *March 2025 – July 2025*
- Developed a model-agnostic uncertainty estimation pipeline in **Python** (with Google Colab) using **Qwen3-8B** to classify ~5,000 medical triage scenarios as non-emergent, partially emergent, or emergent across English, Hindi, and Romanized Hindi inputs.
- Engineered a **2S** (semantic similarity) **confidence score** to quantify model certainty on critical emergency predictions across datasets. Clarifying if the model was confident in its answers before proceeding.
- Evaluated cross-lingual consistency using **BERTScore** precision and recall metrics across identical prompts in multiple languages. The model allows me to factor out language barriers.
- Found systemic model overconfidence, identifying the LLM produced a **>75% confidence score** on nearly all 5,000 cases, regardless of input language.
